

Recipes.

A home for your recipes. On iPhone, iPad and Mac.

About

Recipes is a recipe management app for iOS, iPadOS and macOS built to a simple brief: "What if Apple were to build this?". It's built with the principle that recipes are personal and shouldn't be locked into a platform or have a proprietary file format, meaning that each recipe is saved as a Markdown file in your iCloud Drive, or any other directory that you choose. Recipes is a simple and minimal app, but supports powerful automations via Shortcuts, letting users manage their recipes and create new ones from screenshots, notes and more.

Key Features

- **Ingredient scaling:** Adjust the amount of servings to automatically scale ingredients
- **Ingredient export:** Configurable via included Shortcuts
- **Markdown recipes:** So they remain accessible with or without Recipes
- **Contextual front matter:** Add details such as notes, cook time, servings and source
- **Platform sync:** Recipes are synced across devices via iCloud Drive
- **Custom directories:** Users can pick where their recipes are saved using Files
- **Shortcut Actions:** Open, manage and create recipes using Shortcuts
- **Siri integration:** Open a recipe or listen to steps just by asking Siri
- **Native design:** Recipes adheres to Apple's Human Interface Guidelines
